

The GTECHNIQ Story

GTECHNIQ was born of pure science, cars, and the desire to create the best car care products with a focus on protective coatings, the cornerstone of our success.

In 2004, our scientists created a superior line of products aimed at perfecting all surfaces on a car. Nine years later, the result is a revolutionary line of surface preparations that protect the broadest range of automotive exteriors in a way no traditional wax application can match.

The engineers at Gtechniq tackled the toughest car care challenge and introduced into the market a line of products that outshine and outlast the competition.

Smart Surface Science

“Wow, how did you do that?” is the reaction we hear whenever someone experiences the result of a car that has been protected using Gtechniq.

It's called Smart Surface Science, and it combines micro-abrasive finishing technology coupled with unique bonding elements that team up to produce a truly spectacular result on any painted surface. We've made wax obsolete and replaced it with a crystal coated shine.

What We Cover

Exterior Paint Coverage for surfaces damaged by:

- weather induced acid rain
- bird droppings
- tree sap
- all insects, including love bugs (*Plecia nearctica*)
- spray paint
- hard water spots
- exposure to the sun causing fading, chalking, loss of gloss
- all road de-icing materials

Fabric or Vinyl/Leather: The interior treated surfaces, including factory floor mats and factory-installed trunk and/or cargo area carpet, damaged by:

- ultraviolet-induced fading
- cracking, loose seam stitching
- permanent interior staining caused by food, drink, ink, dye, makeup, etc.
- ultraviolet-induced weakening of the vinyl/leather surfaces resulting in punctures less than a half inch in diameter or rips or tears less than one inch
